

CS 319 - INFORMATION ASSURANCE AND SECURITY

Final Project

Name: Laresma, Kathlene B.

Course: Bachelor of Science in Computer Science

Access Control System

This project implements a secure and efficient access control system for small organizations. Built with python and Flask, it ensures robust user authentication and role-based access control (RBAC) while prioritizing data security. It serves as a scalable foundation for future enhancements.

This is the final output for LOGIN for user authentication

And after you Log in you will create and update your profile.
